

The Sanford Guide to HIV/AIDS Therapy

Care of the HIV infected patient is becoming increasingly complicated and today most patients are managed by teams of health care providers that focus on HIV/AIDS. This approach has been highly successful with a marked reduction in mortality rate and diminished progression to symptomatic AIDS. The major challenge now facing clinicians is stimulating their patients to adhere to the complex therapeutic regimens while managing their complicated toxicities, similar to management of other chronic diseases. As the complexities of care increase, it becomes increasingly difficult to develop simple functional guidelines. In this SANFORD GUIDE, we present a wealth of emerging information, with appropriate references where possible, while trying to give rational guidelines for care.
