

Linear Kit IBM 2.1

Representing a major improvement over earlier versions, this software package will take the drudgery out of linear algebra computations. Designed to run under MS-DOS, it can now run from a hard disk on virtually all IBM compatibles. Among the updated and handy features are: automatic color running if the system supports color; removal of copy protection so duplicate copies can be made in accordance with the License Agreement; the ability to install the program directly on the hard disk; a built-in interactive tutor that replaces most of the operations manual; the ability to attach names and comments to matrices and vectors in the workspaces to help identify them more clearly; quicker notebook operations with new commands; notebook storage on the hard as well as the floppy disk; and the inclusion of the EIGEN operation.
