

U.S. National Security Implications of Chinese Involvement in Latin America

Ultimately, this monograph argues that increasing Chinese engagement with Latin America will make the nation both a powerful competitor and a potential partner for the United States in the Western Hemisphere. On one hand, China with major investments in Latin America and dependence on its material flows is likely to be a nation interested in reducing political instability, armed groups, and criminal activity in the region rather than fueling radical populism and insurgency. On the other hand, the United States needs to consider to what degree it is willing to accept a China that has increasing leverage in its strategic neighborhood and its major trading area. Investment and trade presence leads to growing interest in the political course of the region, and now is the time for the United States to begin to consider how to constructively engage the Chinese in the Western Hemisphere.
